Chapter: Freecom FHD Formatter (PC)

The FHD Formatter is an application that allows you to format your Freecom hard drive to different hard drive formats.

Installation

Click on "Start PC" in the main directory of the hard drive. A menu screen will appear. Select "Software" and then select "FHD Formatter". This will start the application.

Using the software

Attention: Before formatting your Freecom hard drive, we recommend using the "Save Freecom files" option from the Freecom start screen. This will backup all preinstalled Freecom data of your drive (software, manuals) to your local hard drive.

Click on "Start PC" in the main directory of the hard drive. A menu screen will appear. Select "Software" and then select "FHD Formatter".

Formatting your hard drive

On a Windows system, you have three different options to format your hard drive:

- **NTFS Format**

This format is recommended when you want to save files larger than 4GB. NTFS partitions are read-only on Mac systems, i.e. no data can be written to an NTFS-formatted drive on a Mac.

- **FAT32 format**

FAT32-formatted drives are readable and writeable on Mac and PC systems. Files larger than 4GB cannot be saved on FAT32-formatted drives.

- **Convert from FAT32 to NTFS format**

This option allows you to convert your FAT32-formatted hard drive to NTFS format without losing your data.

Select one option and click on "Format". If you select "NTFS Format" or "FAT32 Format" you will be notified that all your data will be lost and if you really want to continue. Click "Yes" to continue.

If the message "There are Freecom files on the hard drive. Do you want to keep these files?" appears and you select this option, the Freecom data (manuals, software) will be copied to a temporary folder on your local hard disk and afterwards copied back to your Freecom Hard Drive.

A message box will appear when formatting is finished.
